Oral presentation

*Time: 15 minutes
(10 minutes presentation and 5 minutes discussion)*

Presentation media

*Beamer and PC for PowerPoint presentations
(USB memory stick)*

Speakers should submit their media 30 minutes prior to the start of their session at the slide desk.

Poster presentation

The posters should be exhibited at the assigned poster board during the whole conference. All participants are encouraged to contact the authors during the coffee breaks.

Paper size A0, portrait.

Proceedings of the conference

The proceedings with full-length papers will be available at the beginning of the workshop.

ViennaFES | Cybersportsday 2025

Tuesday, 16.09.2025

*For the very first time, this conference will feature a new highlight: a **FES-Cycling Race**. In this exciting event, individuals with spinal cord injury will compete head-to-head on a flat track in a real-life, over-ground race – powered solely by their paralyzed legs re-activated through FES.*

This race is more than just a competition. Beyond showcasing athletic performance, it serves as a platform to foster connections, exchange experiences and inspire innovation. Our goal is to raise awareness for the transformative potential of FES technology, outside the scope of traditional therapeutic applications.

Be part of this inspiring event – and discover the exciting possibilities of FES in sports!

STIWELL[®] PROFES

Functional Electrical Stimulation by MED-EL

- functional programs & focused stimulation for complex movement disorders

- intuitive & effective therapy through easy handling & usability

- EMG-triggered multichannel electrical stimulation

- biofeedback activities & 4-channel EMG analysis

- stimulation of denervated muscles

- help functions directly on the device

STIMULATOR RISE

The **Stimulator RISE** represents a breakthrough in the electrotherapy of limp paralysed muscles. This is done with broad biphasic rectangular pulses and, if necessary, very high intensities. It also offers an impulse test to check the progress of training.

New trend: For combining and preparing exoskeleton units and FES sports.

For the treatment of

- Muscle weakness with innervated muscles
- Flaccid paralysis in denervated muscles and muscle degeneration in peripheral pareses
- Treatment of peripheral and central paralysis

Effects of electrostimulation in peripheral paresis

- Maintenance and development of muscle mass and muscle function
- Improved blood circulation
- Better skin condition
- Faster wound healing
- Thicker muscle padding
- Pressure ulcer prevention
- Improved visual appearance and increased self-esteem

Effects of electrostimulation in central paresis

- Muscle building and strength improvement
- Reduction of spasticity
- Promotion of neuroplasticity
- Improved function of the affected extremity
- Improvement of gait pattern, mobility and arm function

Other technical advantages

- Biphasic rectangular pulses
- Biphasic triangular impulses for sensitive skin
- Biphasic triangular pulses for selective stimulation
- Frequency readable on display
- Wide current pulses
- Patented safety electrodes for stimulation of limp paralysed muscles
- Patient switch for self-control during functional use when standing up or walking on the walking bar
- Individual limitation of the maximum current intensity
- For home therapy the device can be password protected

STIMULATOR RISE

Easy to use – constant current output – stimulation without direct current component – programmable.

Für mehr Lebensqualität im Alltag

Streifeneder ortho.production: Ihr Partner für Fesia Walk und Fesia Grasp in Österreich

Fesia Produkte zum Ausgleich einer Behinderung **verbessern die Lebensqualität** durch funktionelle Elektrostimulation. Die funktionelle Elektrostimulation ermöglicht dabei nicht nur die Funktionen Gehen und Greifen, sondern zeigt auch positive Effekte auf **Muskelkraft, Durchblutung, Reduktion von Schmerz und Spastik, Bewegungsumfang, motorisches Lernen und Neuroplastizität**.

Funktionen und Features

Geräte von Fesia kombinieren eine **Mehrfeldelektrode** mit einer einfach zu bedienenden Schnittstelle: Durch die sehr dünnen Elektroden wird ein großer Bereich an der Muskulatur angeregt. Die funktionelle Elektrostimulation, welche kleine, elektrische Impulse aussendet, aktiviert die entsprechende Muskulatur.

Fesia Walk

- Stimulation der Plantarflexion und Dorsalextension, Inversion und Eversion
- einfaches Einrichten: Gehen innerhalb weniger Minuten möglich
- Erkennung der Gangphasen in Echtzeit dank Sensorik
- individuelle Konfiguration
- steuerbar mit Fesia Pro-App für Android: 6 Programme zur gezielten Alltagsunterstützung
- optionale App MyFesia für Android: ideal für die häusliche Fortschrittsverfolgung

Fesia Grasp

- 10 individuelle und 6 kombinierte Bewegungen
- Entfaltung des funktionellen Potenzials im freien Handflächentraining
- maßgeschneiderte Konfiguration
- steuerbar mit der Fesia Pro-App: 5 Programme zur gezielten Alltagsunterstützung
- Öffnen und Schließen der Hand mit einer einzigen Berührung auf den Stimulator oder einer ruckartigen Bewegung

Neurology

Stim2Go

Next Gen Neurostimulation

Stim2Go is a powerful non-invasive and App-controlled neurorehabilitation system. It comes along with ground-breaking features:

- » Hybrid Assistance: device-independent for use with different cyclical movement trainers.
- » Biofeedback: built-in inertial sensor captures patient's motion in real time and can be triggered to support movement.
- » Rich Set of Programs: electrical stimulation methods and preset standard programs with customizable parameters in the field of NMES, FES, TENS and tSCS*.
- » Cloud-Based Data Storage: synchronization between different smart devices and telemedicine.
